

Use Facility Manager to significantly streamline every aspect of facility management operations, including

- work requests
- space allocation
- asset management
- facility infrastructure
- emergency response
- and more.

Manage deliberately.

Autodesk® Facility Manager is an integrated, non CAD-based facility management tool that enables full querying, panning, zooming, printing, and sharing of facility drawings and data. Facility Manager helps you use intelligent DWF™-based drawings to retrieve and edit selected data from existing drawings.

Watch Closely

Retrieve, query, and edit data from your drawings. Find all the information you need to display graphical or data-based reports as graphical interfaces, spreadsheets, or text documents. Easily identify vacated space, department occupancy, and more.

Fluid Assets

Drawings, assets, and other vital information unite in a flexible, open architecture. Fully configurable, Facility Manager uses the latest Autodesk® technology to provide drawing, viewing, and markup capabilities.

Import, Export, Integrate

Use DWF technology to turn project drawings into facility management tools. Draw with Autodesk® Architectural Desktop 2007, Autodesk® Revit® Building 9.1, or Autodesk® Facility Link 7, among other systems, and then import, export, and integrate data directly into Facility Manager. Easily add electronic markups, drawings, as well as custom stamps and symbol libraries.

Dynamically Report

Continuous productivity depends on up-to-date drawings and data. Facility Manager provides more than 130 predefined reports, with significant ad hoc reporting capability, to enable presentation of

precise reports in forms. Use Dynamic Hatching to include colors and patterns that indicate versions and themes in both online drawings and reports. All updates are immediately reflected in your data.

Make Your Mark

Change is good. Add text and graphics to your facility drawings that clearly convey a message or call attention to a problem. Create and use your own distinct, dynamically updating labels to get your point across. Point out problems or modify your drawings without the need for CAD knowledge.

Find Your Way

Intelligent search tools help you quickly locate rooms, equipment, and status through your entire drawing inventory. Once selected, items are clearly highlighted, together with associated information, in the Data Display Area.

Stay Real

Track and display facility components and the areas they service. Related components are graphically displayed for detailed utility management information and effective emergency response. Select a room to see its breaker panels, water valves, and more. Select a data router to view the computers and network devices it services.

FMDesktop Components

Autodesk® FMDesktop includes three additional components to complement Autodesk Facility Manager and provide a complete solution for your facility management needs.

Autodesk® Facility Link

Connect objects in your facility drawings to records in the Autodesk FMDesktop database through an intuitive interface.

Autodesk® Facility Web

Use the web to access and share all facility data and drawings through the Internet or your organization's intranet.

Autodesk® Facility Request

Help your facility occupants enter service requests ranging from corrective maintenance to moves.

Learn More or Purchase
